

1211) **Application**

L 4 1

Exam Quality

While there is no direct evidence that exams were of better quality, the rewrites on a variety of questions suggest that was the case. For example, in exam 4, two multiple choice questions were discovered to have two correct answers. Some questions were revised when it was recognized that a question would take much longer for the student to work than the question writer intended. Other questions were revised in response to the question, "So how are you going to grade this question?" Reviewers were also able to spot questions that might be misinterpreted by students.
